

# CL Challenger Lifts

## Why Choose EnviroLift™?

- » Challenger Lifts' EnviroLift™ cassette-style inground lifts are fully contained in a sealed polymer housing (made from recycled plastic) to protect your investment and the environment.
- » Maximizes the number of service bays to increase revenue potential (inground lifts have a smaller footprint than surface mounted lifts).
- » Universal prekit provides versatility for your lifting capacity needs, accommodates 9,000 / 10,000 / 12,000 and 15,000 capacities.
- » Eliminates the risk of vehicle door damage (no columns or overhead obstructions).
- » Creates a professional showroom style appearance with its open, aesthetically pleasing design.
- » Features a convenient 3" incremental air actuated lock system to raise vehicle at technician's ergonomic working height to minimize fatigue and increase productivity.
- » Corrosion resistant stainless steel air lock release cylinder promotes longer working life.

Models available in 9,000 / 10,000 / 12,000 and 15,000 lb. capacity with many accessories to choose from.

# EnviroLift™ Accessories

Model #: DTLS1

Challenger Lifts' DeTEK - Liquid Detection System informs you should liquid ever accumulate in the bottom of your inground cassette tub.

- » Detects liquid as low as 1<sup>3</sup>/<sub>4</sub>"
- » Red detection light system mounts securely to power unit or work bench for easy visibility
- » Retrofits with other cassette lift models, including competitive brands

Model #: EVAC1

Should liquid ever accumulate in the bottom of your cassette lift, Challenger Lifts' EnviroVAC Cassette Lift Evacuation System will help protect your investment and minimize expensive service calls by giving you the ability to easily remove unwanted liquid immediately into a 16 gallon container.

- » A powerful air driven pump allows quick liquid removal
- » Container easily rolls to a quick-connect evacuation hose next to power unit
- » Container incorporates a drain valve to conveniently dispose evacuated liquid
- » Retrofits with other cassette lift models, including competitive brands

For more information, contact your Authorized Challenger Lifts Distributor.

## Stay Dry™ inground lift preventative maintenance system

Stay Dry is an automatic preventative maintenance tool which is pneumatically powered off of the existing internal air supply line. As the lift operator disengages the air actuated safety locks to lower the lift, an internally mounted flojet pump quietly removes any accumulated condensate from the floor of the lift containment system out through the hydraulic chase tube.

### Features:

- » Automatically displaces condensation from tub bottom when lift is lowered
- » Can easily be retrofitted to older lift models and competitive brands
- » Eliminates costly maintenance calls and lift downtime
- » Prolongs the life of the inground lift and its hydraulic components

### Bench Mounted Controls

- » Provides sleek professional showroom style service facility
- » Easily mounts to many of the major workbench manufacturer's configurations
- » Easy access 3 button control includes raise, lower and lock release functions

### part numbers:

Part#: StayDry

Part#: DTLS1

Part#: BMC\*

Part#: 10315

Part Number	Description
10313	Two 6" Stack Adapters
10315	Stack Adapter Kit - includes: four 3" Stack Adapters, two 6" Stack Adapters, and two Organizer Racks with mounting hardware
StayDry	Automatic liquid evacuation device
EVAC1	Manual liquid removal drum
DTLS1	Liquid detection tool
BMC	Bench mounted controls
